RISK FACTORS (NON-EXHAUSTIVE)

1. Principal at risk: investors may receive shares worth materially less than the Nominal Amount and may lose all invested capital.
2. Coupons are fixed but do not compensate for a decline in the Laggard below the Strike Price once a Knock-in Event has occurred.
3. Early redemption (autocall) risk: the Note may be redeemed early and the investor may not be able to reinvest at a similar return; coupons stop on redemption.
4. Credit risk: payments depend on the Issuer's ability to pay.
5. No dividends are received; secondary market is limited and the sell-back price may be significantly below the Nominal Amount.
6. Concentration / worst-of risk: redemption is determined by the worst-performing Underlying.
7. Physical delivery may involve settlement costs, currency conversion and market risk between delivery and sale.
